

Solution Requirements

Date	29 June 2026
Team ID	xxxxxx
Project Name	Personalized Networking Assistant
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Users can securely access the application to manage networking sessions and conversation history.	High
2	Authorization levels	Standard users can generate conversation starters, perform fact checking, and view their own history and feedback.	Medium
3	External interfaces	Integrates with the Wikipedia API for fact verification and uses FastAPI services for backend communication.	High

4	Transactions processing	The system processes user inputs, generates AI conversation starters, verifies facts, and stores conversation history and feedback.	High
5	Reporting	Displays conversation history, feedback history, and generated networking suggestions through the Streamlit interface.	Medium
6	Business rules, etc.	Conversation starters are generated based on event details and user interests. Fact checking is performed before presenting verified information when requested.	High
7	Compliance to laws or regulations	Protects user information and follows general data privacy practices without storing sensitive personal information unnecessarily.	Medium
8	<i>Other</i>	Allows users to submit feedback to improve future networking suggestions and user experience.	Low

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	Generate conversation starters and responses quickly.	Response generated in less than 2 seconds
2	Scalability	Support multiple users and networking sessions.	Supports at least 100 concurrent users
3	Security & Data Privacy	Protect user data and validate API requests.	Secure API communication and safe storage of user data
4	Reliability & Availability	Ensure the application remains available during normal usage.	99% availability during operation
5	Usability & Accessibility	Provide a simple, user-friendly Streamlit interface with clear navigation.	Users can complete tasks without technical training
6	<i>Other</i>	Maintainable and modular code using FastAPI, Streamlit, and separate service modules.	Modular project structure with reusable components
