

Technology Stack

Date	29 June 2026
Team ID	xxxxxxx
Project Name	Personalized Networking Assistant
Maximum Marks	2 Marks

Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

Fill out the table below to detail the specific technologies chosen for each component of your architecture and provide a brief justification for your choice.

Technology Stack Details

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side	Streamlit (Python)	Provides a simple, interactive, and responsive web interface for entering event details, generating conversation starters, viewing history, and submitting feedback.

2	Backend / Server-Side	Python with FastAPI	FastAPI offers high performance, automatic API documentation, and modular service development for handling networking requests efficiently.
3	Database / Data Storage	JSON Files	Lightweight storage for conversation history and user feedback. Suitable for a small-scale project without requiring a full database server.
4	Cloud / Hosting / Deployment	Local Deployment (Uvicorn + Streamlit)	Enables easy local development, testing, and demonstration before cloud deployment.
5	Version Control & CI/CD	Git and GitHub	Supports version control, collaboration among team members, and centralized project management.
6	Third-Party APIs / Other Tools	Wikipedia API, Pytest, Uvicorn	Wikipedia API verifies facts, Pytest automates testing, and Uvicorn runs the FastAPI backend efficiently.
