Project Title	Personalized Networking Assistant
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The **Personalized Networking Assistant** is an AI-powered application designed to help users prepare for professional networking events. The system analyzes event details, generates personalized conversation starters, verifies information using Wikipedia, stores conversation history, and collects user feedback. The solution aims to improve communication confidence, networking effectiveness, and user engagement through an intuitive AI-assisted platform.

Project Overview	
Objective	The primary objective is to assist students and professionals in building meaningful professional connections by generating personalized conversation starters, analyzing event topics, verifying information, and maintaining networking history.
Scope	The project covers event analysis, AI-powered conversation starter generation, Wikipedia-based fact verification, conversation history management, feedback collection, API development using FastAPI, a Streamlit-based user interface, and automated testing.
Problem Statement	
Description	Many students and professionals find it difficult to initiate conversations during networking events due to limited confidence, lack of relevant discussion topics, and uncertainty about the accuracy of information they share.

Impact	Addressing these challenges improves networking confidence, enhances communication skills, encourages meaningful professional relationships, and increases the effectiveness of networking events.
--------	--

Proposed Solution	
Approach	Develop an AI-powered assistant that analyzes event information and user interests to generate personalized conversation starters. The system also verifies information using the Wikipedia API, records conversation history, and collects user feedback for continuous improvement.
Key Features	• AI-generated personalized conversation starters. • Event topic analysis. • Wikipedia-based fact verification. • Conversation history management. • User feedback collection. • FastAPI REST API backend. • Streamlit interactive user interface. • Automated testing using Pytest.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU	Intel Core i5 or higher
Memory	RAM	8 GB or higher

Storage	Local Storage	1 GB available space
Software		
Frameworks	Backend & Frontend	FastAPI, Streamlit
Libraries	Python Libraries	Requests, Pytest, Uvicorn
Development Environment	IDE	Visual Studio Code or PyCharm
Data		
Data	User input, JSON files, Wikipedia API	JSON format, API responses
