

Code-Layout, Readability and Reusability

Date	01 July 2026
Team ID	XXXXXX
Project Name	Personalized Networking Assistant
Maximum Marks	5 Marks

Code-Layout, Readability and Reusability:

This document evaluates the quality of the codebase in terms of its structure, readability, and reusability. Well-organized code with proper naming conventions, comments, and modular design ensures that the project is maintainable and can be extended or reused in future development.

Code Layout Checklist:

S.No	Code Quality Parameter	Description	Followed (Yes / No / Partial)	Remarks
1	Consistent Indentation	Uniform spacing/tabs used throughout the code	Yes	Proper Python indentation followed in all files
2	Proper File Structure	Files and folders are logically organized	Yes	Project organized into services, routes, frontend, data, and test modules
3	Meaningful Variable Names	Variables reflect their purpose clearly	Yes	Variables such as event_description, interests, themes, and conversation_starters clearly represent their purpose
4	Function / Method Names	Functions are descriptively named	Yes	Functions such as analyze_event(), generate_conversation(), fact_check(), save_history() are self-explanatory
5	Code Comments	Inline and block comments explain logic	Yes	Important modules and functions contain comments for better understanding
6	Modular Design	Code is split into reusable functions/modules	Yes	Event analysis, conversation generation, fact checking, logging, and API routing are separated into independent modules
7	No Redundant Code	Duplicate or unused code is removed	Yes	Reusable functions are used to avoid repetition and improve maintainability
8	Error Handling	Exceptions and errors are handled gracefully	Partial	Wikipedia API requests and file operations include basic exception handling

Reusable Components / Modules:

S.No	Component / Module Name	Language / Technolog	yWhere Reused	Reusability Level (High / Medium / Low)
1	Event Analyzer Module	Python, Transformers (DistilBERT)	Event theme extraction and analysis	High

2	Conversation Generator Module	Python, GPT-2, Transformers	Generating networking conversation starters	High
3	Fact Checker Module	Python, Wikipedia API	Topic verification and information retrieval	High
4	History Logger Module	Python, JSON	Storing and retrieving conversation history	Medium
5	Feedback Logger Module	Python, JSON	Recording and managing user feedback	Medium

Overall Code Quality Assessment:

Aspect	Rating (1-5)	Comments
Code Layout & Structure	5	Well-organized project structure with separate modules
Readability	5	Meaningful variable names and clear coding style
Reusability	5	Modular design allows components to be reused easily
Documentation / Comments	4	Important sections are documented with comments
Overall Score	5	The project follows good coding practices and maintainable design
