

Coding & Solution

Date	01 July 2026
Team ID	xxxxxx
Project Name	Personalized Networking Assistant
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/zafreenshaik19/personalized-networking-assistant
Programming Language(s)	Python
Framework(s) Used	FastAPI, Streamlit, Hugging Face Transformers

Key Features Implemented	Event Theme Analysis using DistilBERT, AI-based Conversation Starter Generation using GPT-2, Fact Checking using Wikipedia API, Conversation History Management, User Feedback Collection, FastAPI REST APIs, Streamlit Frontend Interface
Pending / Incomplete Features	Advanced user authentication, database integration, cloud deployment, personalized recommendation engine
Setup / Run Instructions	1. Install dependencies using pip install -r requirements.txt 2. Start FastAPI server using uvicorn app.main:app --reload 3. Launch Streamlit application using streamlit run frontend/streamlit_app.py 4. Open browser at http://localhost:8501

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The Personalized Networking Assistant was developed using a modular architecture that separates frontend, backend, AI services, and data storage components. FastAPI is used for API development, Streamlit provides the user interface, DistilBERT performs event theme extraction, GPT-2 generates networking conversation starters, and Wikipedia API supports fact verification. The project successfully demonstrates the integration of Natural Language Processing and AI techniques in a practical networking assistance application.
